

**18.** The article divider assembly of claim **16** wherein the display bracket is angled relative to the divider member to face downward.

**19.** A method for displaying an article, the method comprising the steps of:

providing an article divider assembly with a support bracket mounted to a retail display, and a plurality of divider members extending from the support bracket; and

providing an article in the display with an upper region of the article between a pair of divider members without blocking an outward face of the article.

**20.** The method of claim **19** further comprising the step of providing a shower door component as the article.
